Shell (SSH)?

#Telnet #SSH #SecureShell In this video we have explained what exactly is Telnet and Secure Shell. Telnet is an application protocol used on the Internet or local area network to provide a bidirectional interactive text-oriented communication facility using a virtual terminal connection. Secure Shell is a cryptographic network protocol for operating network services securely over an unsecured network. Typical applications include remote command-line, login, and remote command execution, but any network service can be secured with SSH. Looking for Networking Training? Join our Free Demo Session:
